Mateusz Piotrowicz
Frontend Developer

SKILLS

Frontend	Testing	Styling	Tools / Other
JS / TS	React testing library	Design System	Git / Github
Next.js	Jest	Styled components	Jira, Confluence, Bitbucket
React	Cypress	Less / Sass	Scrum, Agile
Redux		Material UI	Jenkins
Webpack		Bootstrap	Docker
Storybook			Rest API
Microfrontends			Node.js

Experience

2022 - present

Company: Millennium Bank

Project: As part of the project, various versions of loan application forms dedicated to entrepreneurs were prepared. My responsibilities included a wide range of tasks, from coding and testing to documentation, code review, and collaboration with analysts, designers, and other teams across the organizational structure. Our goal was to provide comprehensive solutions and integrate many modules, which required close cooperation and coordination of activities between various teams. After the successful implementation of the first versions of the forms, the application was developed, taking into account user feedback and updates related to new regulatory requirements.

Technologies: React, Redux, TypeScript, Webpack, Storybook, Less, Design System, React testing library, Nx, Webview, Module federation, Jenkins, Node.js

2019 - 2022

Company: Scope Group

Project: The client in this project was a provider of services related to credit ratings, fund analysis and solutions dedicated to risk assessment and monitoring. My role in this project was to actively participate in the team responsible for creating and developing React applications and expanding the functionality of existing libraries. My tasks also included active participation in the creation of microfrontend architecture,

which helped to create flexible and modular approach to building applications. Additionally, I implemented Design Systems that were used in other project modules, which contributed to maintaining the consistency of the user interface at various levels of the application.

Technologies: React, Redux, TypeScript, Next.js Webpack, Storybook, Styled components, Design System, Material UI, Micro frontends architecture, Cypress e2e testing, Docker, Jenkins

2017 - 2018   **Company:** HONKI Digital Agency

Project: My main responsibilities included not only developing and maintaining websites and online stores for clients, but also active participation in the creation of various custom SaaS products. As part of these activities, I was involved in the design and development of Content Management System (CMS), e-mailing applications and administration panels for e-commerce platforms.

Technologies: JavaScript, TypeScript, Css / Sass, Bootstrap, Php

2015 - 2017   **Company:** Mangomedia.pl

Project: As a person responsible for the front-end development of internet products, including websites and e-commerce platforms, my role focused mainly on the implementation of the designed solutions. When working on the delivered projects, my goal was not only to provide an aesthetic and functional interface, but also to focus on optimizing the performance and responsiveness of the websites.

Technologies: JavaScript, Css / Less, Bootstrap, Php, Wordpress

Education

2014 - 2018   **The University of Adam Mickiewicz in Poznań**
Field of Study: Computer Science, Information and Internet Technologies
